

Dear Sirs,  
while the BPL falls under Part 15, I am very concerned about the RFI potential of this service. I am a volunteer radio operator with the National Hurricane Center in Miami, FL and we use the HF bands for our stateside and Caribbean reporting. Interference to these operations would be disastrous during a hurricane situation affecting the safety of our citizens and property. I urge you to consider the electrical utilities ability and motivation to correct interference problems in a timely manner, especially under crisis circumstances.

Regards,

Michael Williams
